Sandisk Sansa Clip 2GB

Ultra Compact MP3 Players: What to Look For

Ultra Compact MP3 players don't have many features and are designed simply for playing music. These miniature **devices** are small in size, but they still need to pack a big punch to make it into our TopTen. When looking for an ultra compact player consider the device's physical size, storage size and battery life.

Below are the criteria TopTenREVIEWS used to evaluate ultra compact MP3 Players:

Storage Capacity

Most ultra compact players' storage size hovers in the 1GB to 2GB range. This equals about 250 to 500 songs respectively. As flash **technology** becomes more affordable don't be surprised to see an iPod Shuffle or Creative Zen Stone with 4GB or 6GB of storage in the future.

Battery Life

The fact is MP3 players, no matter what their classification, need a substantial battery life. Having the battery die in the middle of a workout is not acceptable. Look for an ultra compact MP3 with a battery life of 12 to 15 hours of continual use.

MP3 Weight

An ultra compact MP3 player wouldn't be "ultra compact" if it wasn't tiny. An MP3 player's weight usually indicates its overall size, in this case smaller is better.

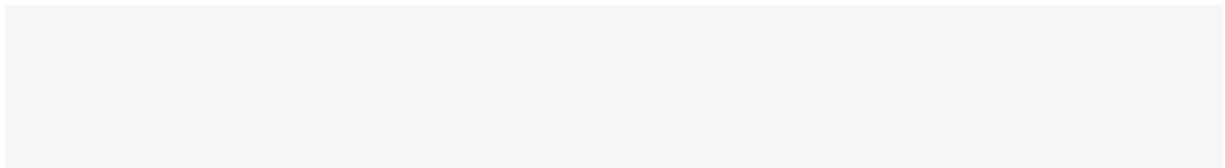

Display Type

Having a display is a matter of convenience. Although the best selling **ultra compact MP3 player** on the **market**, iPod Shuffle, doesn't include a display it is a feature to consider before deciding on a particular model.

FM Radio

Having an FM radio integrated into the MP3 player isn't exactly a deal breaker, but sometimes 500 songs just isn't enough, having the ability to switch over to the radio on a whim is handy.

There are many more under this heading of Ultra compact – including 4-8 G memory cards that only play music and sit in a clip the size of a matchbox and that you can plug ear phones into.
